

The StriveTogether Cradle to Career Network spans:

68 communities in

29 states + Washington, D.C.

the network reaches 14 million

including 8 million children of color

nearly 1 in 5 of all youth experiencing poverty in the U.S.

a path to economic mobility

StriveTogether is a national movement with a clear purpose: help every child succeed in school and in life, regardless of race, ethnicity, zip code or circumstance.

StriveTogether expands economic mobility for children by improving cradle-to-career outcomes. We partner with the StriveTogether Cradle to Career Network as they build the civic infrastructure that enables their communities to get better results for every child.

Civic infrastructure is the way a community holds itself collectively accountable for eliminating disparities and creating opportunities. A strong civic infrastructure ensures that every child is supported to thrive through equitable access to education, employment, health care, housing and more.

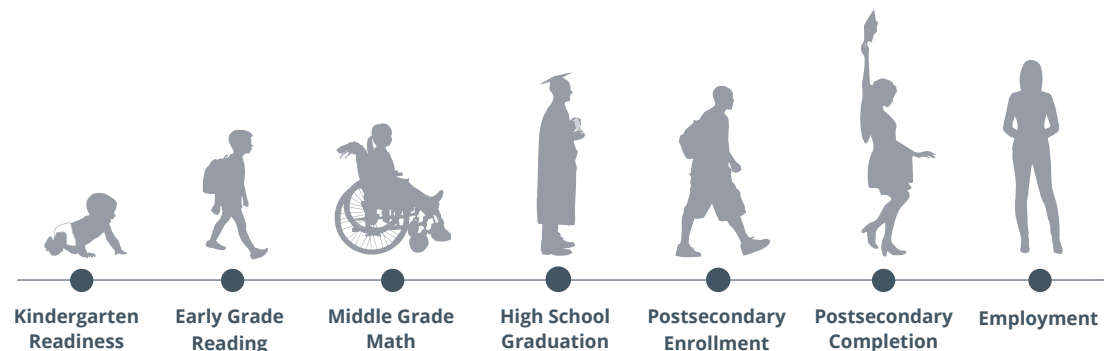

When institutions and communities structure their work around the needs of young people, we can improve the cradle-to-career outcomes that lead to economic mobility.

measuring key milestones

Our network members get better results for youth from cradle to career, measuring key milestones to track their progress.

These seven milestones are critical steps on the path to economic mobility. For instance, when students have what they need to be proficient in reading by the end of third grade, they're four times more likely to complete high school.¹ Individuals supported to complete high school earn about 23% more than individuals who don't graduate.² And for each level of education reached after high school, earning potential increases.³

THE CRADLE-TO-CAREER CONTINUUM

StriveTogether[®]

Every child. Cradle to career.

Our approach: The Theory of Action™

Continually evolving with lessons from the network, the StriveTogether Theory of Action™ is a proven framework for building civic infrastructure and transforming the systems that shape opportunity.

Challenge	StriveTogether Theory of Action™ Solution	
Working on symptoms not root causes		Shared community vision: Communities come together around common goals and shift policies, practices, resources and power structures.
Unclear on what's working or how to spread success		Evidence-based decision making: Data gives communities insights to improve strategies and make smarter investments.
Working in silos		Collaborative action: Community leaders work together using data to change practices and policies to support youth.
Searching for silver bullet solutions		Investment and sustainability: Communities use data to allocate resources for the greatest impact.
